

Facilitator: Benjamin Vinnerholt
Participants: Gustav Häger, Benjamin Vinnerholt, Gustaf Spjut, Jonathan Köre, Filip Andréasson
Date: 2018-10-16

1 Meeting Agenda

Group meeting for Basta-Gruppen-LTD, group ID: 19.

2 Objectives (5 min)

Discuss what needs to be done, and in what order until the deadline on Sunday

- One more sequence diagram, for what part of the program?.
- Updating the RAD and SDD.

3 Reports (15 min) from previous meeting

Gustaf has not finished manager user story yet.

Gustav has created a sequence diagram for sending a message. He has also fixed most issues that pmd has reported in the program. He has also worked some more on the SDD.

Jonathan has refined some of his code, wrote some javadoc, and worked on further user stories. He also added a userstory to the rad, wrote some in the SDD, and helped out a tiny bit with pmd. Filip has rearranged parts of the code for a better MVC structure and has begun coupling conversations with their respective users. Benjamin has been working on being able to search for contacts and conversations, as well as rearranging some of the code.

Benjamin has been working on implementing search functionality. The user can now search for both contacts and conversations, aswell as search for conversations in which a specific user is in. Timestamps for messages have also been implemented. Benjamin has also made minor code fixes such as formatting.

4 Discussion items (35 min)

Documentation

What needs to be done.

- **Documentation**

We should write more on the documenation this week since the deadline is on sunday. The SDD is almost done, it just needs a few more diagram and updated reports.

The RAD just needs a few User Stories added to it in order to be done.

- **Sequence diagrams for interesting user stories.**

Create sequence diagrams for logging in and creating a conversation.

Facilitator: Benjamin Vinnerholt
Participants: Gustav Häger, Benjamin Vinnerholt, Gustaf Spjut, Jonathan Köre, Filip Andréasson
Date: 2018-10-16

- **What needs to be done**

UserPageView needs to be refactored to adhere to the overall structure of the program.

Functionality to see and edit the participants of a conversation needs to be implemented.

The whole idea of the application is "a messaging app for companies", but at the moment it is just a messaging app. Therefore, we want to implement the user stories regarding that a manager can create accounts for their employees, and that they can assign them into work groups.

5 Outcomes and assignments (5 min)

Filip will couple users with conversations and then write tests for the model. If there is more time, Filip will pick up any remaining user stories and implement these.

Benjamin will be implementing functionality to see who's part of a conversation, add more users to a conversation and functionality to remove users from a conversations. Benjamin will also add user stories to the RAD and review the SDD.

Gustaf will do manager user story and should pitch in with the RAD and SDD. Gustaf will also refactor UserPageView.

Jonathan will do the sequence diagram for the Login feature.

Gustav will: continue to work on the SDD by updating images, finishing the text and updating/adding reports from JaCoCo. He will also help with finishing User Stories when needed. He will also look at formatting tools so that the code is uniformly coded.

6 Wrap up

Next meeting will be on Thursday (18/10) 0930.
