## 1 Meeting Agenda

Group meeting for Basta\_Gruppen\_LTD, group ID: 19.

## 2 Objectives (5 min)

Discuss changing the controller and view so that they are separated.  
Discuss the current sprint.  
Discuss the current state of the SDD.  
Discuss the current state of the RAD  
Discuss cleaning up the code / review.

## 3 Reports (15 min) from previous meeting

Gustav and Jonathan has worked on making the infrastructure work via an observer pattern. Now, the "database" shadows in the model and saves its data, without the model having to know about the JsonSaver and loader directly.  
Benjamin has been working on logout functionality  
Gustaf has been adding statusMenu and corresponding pictures.  
Jonathan has figured out how to separate the controller and the view, and has so far implemented it on the LoginView and LoginController. He has also worked on the UML diagram.  
Filip has worked on creating sequence diagrams for methods and touched up on group conversations.

## 4 Discussion items (35 min)

- **Discuss changing the controller and view so that they are separated**  
The controller and view needs to be separated. Since we are using JavaFX we thought it was impossible to separate these in a useful manner since they are so intertwined. Jonathan has come up with a plan to do this and will start implementing it. Filip and Gustaf will also implement the fix.
- **Discuss the current sprint**  
The current sprint is almost done. A lot of the work during the week has also been directed towards improving the code and implementing design patterns.
- **Discuss the current state of the SDD**  
If we first finish the work that we have started it will be much easier to write the SDD. We will therefore fix the program so that it can run properly, and then finish the SDD.

Facilitator: Gustav Häger

Participants: Gustav Häger, Benjamin Vinnerholt, Gustaf Spjut, Jonathan Köre, Filip Andréasson

Date: 2018-10-10

---

- **Discuss the current state of the RAD**

Same as for the SDD but with the RAD.

- **Discuss cleaning up the code / review**

Gustav and Gustaf have started using pmd to clean up the code. This will continue until all current issues are resolved.

We will look into using JaCoCo.

When you have time over you are to look at the user stories in the code-review area in Trello to check if the code that has been written is ok. Then you are to move the user story to "Done".

## 5 Outcomes and assignments (5 min)

Gustaf will finish the set status story and start cleaning model using pmd. Filip will finish up on group conversations and try to finish making a sequence diagram for some functionality. Benjamin will be working on searching for contacts as well as reviewing already implemented code. Jonathan will continue work on separating controllers/views and making UML diagram Gustav will: continue to work on the sdd, continue fixing issues using pmd, look into using JaCoCo

## 6 Wrap up

Next meeting will be on Friday (12/10) around lunch through discord.
