Facilitator: Gustav Häger
Participants: Gustav Häger, Benjamin Vinnerholt, Gustaf Spjut, Jonathan
Köre, Filip Andréasson
Date: 2018-09-19

1 Meeting Agenda

Group meeting for Basta_Gruppen_LTD, group ID: 19.

2 Objectives (5 min)

Check up on what everyone has done. Plan for the future sprint?

3 Reports (15 min) from previous meeting

-Benjamin, Jonathan and Gustav has started with the program and have completed one user story until the testing stage and have completed several tasks on the other stories. The program is startable but hasn't yet implemented all user stories for the sprint.
-Gustaf and Filip have supplemented tasks and acceptance criteria for all the user stories in the project backlog. They also completed the RAD-document for this sprint and made a sketch for an early prototype of the application.
-Filip has completed the powerpoint for the seminar.

4 Discussion items (35 min)

- **Check up on what everyone has done**
  See reports.

- **Plan for the future sprint**
  We would like to implement a server and database during the next sprint, how we will do this has to be decided for during the next meeting, after this sprint has been completed.
  After this we would like to implement a feature that enables the user to log in.
  We will preform a code review before starting the next sprint. We will also create a comprehensive design document, so that development can be performed by everyone at the same time. A big issue during this sprint is that the work in the group looks unproportional if you look at the git commit. The work that Filip and Gustaf has put in on the user stories and RAD has however been paramount and equal to that of Benjamin, Jonathan and Gustav.

5 Outcomes and assignments (5 min)

Benjamin, Jonathan and Gustav will finish the user stories for this sprint.
Filip and Gustaf will try to resolve an issue regarding Gradle on their respective computers. They will also upload the RAD to GitHub.
