1   Meeting Agenda

Group meeting for Basta_Gruppen_LTD, group ID: 19.

2   Objectives (5 min)

Discuss progress.
New RAD version.
Completing the design document to be up to date as of the current Sprint.

3   Reports (15 min) from previous meeting

-Benjamin and Gustav have worked with the login user story. You can now log
in to the program, however since there is no backend it is hard to test the code
that has been written.
-Gustaf and Filip have been doing the contacts and conversation stories.
-Jonathan worked on making the enter key work as a send message button story,
as well as the create conversation story.
-The project is now more modular due to a higher use of interfaces where ap-
propriate. This also aids in the separation of view and controller in the JavaFX
"controller" classes. The view has however not yet implemented any interfaces,
and will need to do so in the future to ensneceure that parts of the MVC struc-
ture is interchangeable.
-Jonathan and Gustav have started with RAD version 2 which covers the user
stories in the current sprint.

4   Discussion items (35 min)

- **Design document**
  We have exprerienced problems when programming on different locations
  due to issues in communication. Therefore we deem it necessary to come-
  plete the design document in a more detailed way in order to continue
  work in a more orderly manner. This will make it more clear regarding
  who is supposed to do what.

- **Testing issues**
  Since the views and controllers are intertwined, the controller is impossible
  to test on it self at this moment in time. This is because the creation of the
  controller/view uses a fxml loader which only works when the rest of the
  program is running. Lifting out the code to a seperate controller class does
  not really solve the problem, since a lot of our controllers responsibilities
  is to reach some of the items in our view, in order to manipulate them.
  Etc, the controller/view clears a textView. Is there a way around this?
  This we will have to ask Mazdak.

5   Outcomes and assignments (5 min)

Jonathan, Gustaf and Gustav will work with the design document after the
meeting and the goal is to complete it before tomorrow.
Jonathan, Benjamin, Gustaf and Gustav will continue working on the RAD
document in order to get it done today, which is the goal here as well.
We will ask Mazdak about the testing issues.

6   Wrap up

Next meeting will be on Tuesday (2/10) 9:30 in m1213b.
