1 Meeting Agenda

Group meeting for Basta_Gruppen_LTD, group ID: 19.

2 Objectives (5 min)

Discuss what needs to be done
We need to start with the peer review of group 20s project.

3 Reports (15 min) from previous meeting

Gustaf has made a controller factory, refactored all views to get their controllers
from the factory. He has moved responsibility from the mainview to the main-
controller. He has made additions to the SDD such as test and pictures. Gustaf
has added a few tests of the model.

Gustav has (again) updated the SDD and the RAD with new screenshots from
STAN and jacoco. He has looked through the program and fixed many issues
detected by pmd. He has created package information for javadoc. He has
remodeled the Infrastructure UML. Helped fix issues related to null URLs in
the program that were related to running the program with gradle (something
which we had not done properly before). He has written javadoc and some
header comments on files stating authorship. Used gitinspector to look at how
much everybody has contributed, and forwarded the information. Fixed an issue
where MainView was sent in to other views as itself and not as a IMainView in-
terface. Fixed so that gradle actually could build and run, which included fixing
relative paths for all fxml loaders. He changed the IDataSaver and IDataLoader
to be more modular, and made JsonLoader and JsonSaver more modular as
well by taking in paths for json. Fixed Readme on github, and also uploaded
json-files to be used for testing to github.

Jonathan finished the sequence diagram for saving a message, along with cre-
ating a UML for the controller package. He also assisted in the creation and
implementation of the new observerpattern, and wrote a lot of java doc for
most of the MainModel as well as Loginview, ChatView and their respective
controllers. He also made a lot of other touches around the documentation and
code overall.

Filip has created a new observer pattern for the project and updated the RAD
with new user stories and updated old ones that weren't up to date. Has also
written and proof read the SDD. He has written javadoc and header comments
for the project and updated a few tests. Booked group rooms and meetings for
the coming week.

Benjamin has implemented functionality to remove and add users from and to
a conversation, written tests for the MainModel, cleaned up code, removed un-
neccessary imports, added user stories to the RAD, contributed to the SDD,
added author notes and written javadoc.

4 Discussion items (35 min)

Peer Review
Final Report
Presentation

- **Peer Review**
  We aim to finish the peer review by tomorrow (23/10) around lunch. We
  will try to look at the code at the same time in order to get everyones
  input in every aspect of the application/code.

- **Final Report**
  The SDD needs a few more touches. Where we will hone the SDD and
  place the images of the diagrams where they are supposed to be.

- **Presentation**
  We will finish the presentation after the peer review has been completed.
  We aim to set up a schedule for the presentation in order to check of the
  User Stories as fast as possible. We will convert the relevant parts of SDD
  to a presentation. We will try to finish the presentation tomorrow as well,
  it is however not our top priority.

5 Outcomes and assignments (5 min)

The entire group will gather and go through group 20's project and evaluate it
based on the criteria stated in the Peer Review template.

6 Wrap up

Next meeting will be on Tuesday (22/10) 09:30.
